

Device Antennas, Halfwave Single-band 806-1990 MHz

- Up to 2.3 dBi gain styles with semi-flexible radome and adjustable knuckle
- Halfwave design requires no ground plane
- Models for all GSM/CDMA modems
- Sleek molded profile, with a choice of SMA or TNC connectors

These halfwave antennas require no ground plane for operation. This makes them ideal for use with portable devices or products with no substantial ground plane. They can even be used with products that consist of all plastic chassis or case.

The PSKN Series antennas use a full length center fed dipole configuration. A knuckle feature allows the antenna to be adjusted between a straight position, to a 90° right angle position. This is useful for products that may need to be placed both horizontal and vertical, or where the connector is placed on the side of a radio device.

The PSN3 Series antennas offer the same electrical characteristics as the PSKN3 antennas, but they have a permanently fixed straight position.

Maximum radiation is achieved along the horizon, and bandwidth provided is substantial. VSWR is typically 2:1 or better over the desired frequency range. The antennas are available in many popular frequency bands.

The radome is made of flexible Polyurethane. Standard connector styles available include TNC or SMA. For FCC part 15 compliance, select models offer reverse polarity connectors.

Both Series meet industrial and military shock & vibration specs. the PSKN3 Series is rate IPx5 for water ingress. The PSN3 has a higher water-resistance and is rated IPx7.
