- Available in models with 5 dBi - 9 dBi gain
- Elevated Feed Magnetic versions provide additional clearance for light bars

Mobile Mark's new ECO Mobile series are high frequency antennas designed for new technology applications in the 2.4 - 6 GHz bands. There are individual models for the most popular systems: WiFi, WiMAX, 3.5 GHz, Public Safety 4.9 GHz, 5 GHz Broadband and DSRC 5.9 GHz.

These antennas are free space designs and ground plane independent. High gain coupled with low loss cable compensates for the losses that occur at higher bands. All antennas use low loss RF-195 cable to improve efficiency. The vertical radomes are black fiberglass with an ABS base assembly. All antennas are weatherproof.

The magnetic mount models have a 2.6" (66 mm) base, and use a strong commercial magnet. They provide a scratch resistant covering on the bottom. The cable exits out of the side of the base. Special "EF" elevated feed versions are available. These models have the radiating element located higher in a longer radome, providing higher clearance for lightbars on police vehicles.

Trunk lid units mount securely to vehicle trunk lip with set screws. An allen wrench is provided for attaching the mount. A cable guide routes the cable around the mounting bracket and through the trunk molding into the vehicle, where the radio is typically located.
